FRENCH	<div><div></div></div>
ENGLISH	<div><div></div></div>

JACQUES AKLIKOKOU

WEB DEVELOPER

EXPERIENCE

PLOGG

JAN 2017 - MARCH 2018

Web developer
North Hatley, Quebec

My main job was to create Wordpress plugins and add content to existing websites in PHP.

- Content service provider

I created a content service provider plugin for Wordpress in PHP.

The client can buy the page (often an article about dentist) from our main site and the content will be displayed on the site of the client.

Everytime the content is updated on the main site, it will be updated on the site of the client.

- Presentation website

I created website for many dentists to show their work and add visibility online. The website often have pages to describe the dentist, to show images of his clinic and any information needed to contact him or her. I created the website from a photoshop design that our client agreed on with our designer.

I worked with my team to deliver the final product to our client in the due time after we passed it through a quality assurance.

Other features i worked on

- Online appointment plugin

- Feature to allow clients to return damaged products after a purchase on our online shop.

SOCIÉTÉ D'HISTOIRE DE SHERBROOKE ET MAGOG

JAN 2016 - DEC 2016

Web developer
Sherbrooke, Quebec

I developed, in team of six, a web platform to allow our client to sale historical documents, old news paper and pictures.

My team and I worked with the 'AGIL' method to deliver a final product to our client in the time due.

We made the design, evaluated the budget and created automated tests using phpunit to deliver our product in many successives releases.

I used PHP (laravel framework) in back-end, HTML5 / CSS3 in front-end with Javascript and Ajax. MySQL as database manager.

CAGECFI

SEPT 2015 - DEC 2015

Web developer intern
Lome, Maritime Region

I developed a web platform to allow students to choose a set of courses that they will study in our formation camp.

I used WLanguage (front-end and back-end) with Microsoft SQL Server (database manager).

I also created the same platform using JAVA (back-end) and HTML5 / CSS3 (front-end) with MySQL.
